# Md Junaid Nayeem

Senior Full Stack Engineer — React — Next.js — TypeScript — Node.js

London, UK — (+44) 7469600524 — junaid85210@gmail.com

Portfolio — LinkedIn — GitHub

## Professional Summary

Senior Full Stack Engineer with 4+ years of experience building large-scale, production-grade web applications for government and enterprise clients. Currently leading frontend development of a UK Government digital service (GOV.UK) serving millions of users, built with Next.js, React, and TypeScript. Proven ownership across the full stack — architecture, RBAC and security design, design systems, multi-tenant SaaS, CI/CD, and AI/LLM product integration — with a strong foundation in data structures and algorithms (250+ problems solved on LeetCode and GeeksforGeeks).

## Technical Skills

**Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3/SCSS, Python, Java, SQL

**Frontend:** React 19, Next.js (App Router, SSR, Middleware), Angular, Redux, Jotai, TanStack React Query, React Hook Form, Zod, i18next

**UI & Design Systems:** Tailwind CSS v4, Radix UI, shadcn/ui, GOV.UK Design System (GDS), Ant Design, Material UI, Storybook, WCAG 2.1 AA accessibility

**Backend:** Node.js, Express, Next.js Server Actions/API Routes, RESTful APIs, NextAuth.js, OAuth 2.0, JWT

**Databases:** PostgreSQL (Supabase, Row-Level Security), MongoDB, MySQL, Prisma

**Testing:** Vitest, Jest, React Testing Library, Cypress (E2E), Storybook Interaction Tests

**DevOps & Tooling:** Nx Monorepo, Docker, Kubernetes, AWS CodeBuild, Vercel, Git/GitLab, GitHub Actions, ESLint, Husky, npm security audits

**AI Tools:** Claude, GPT, Gemini, Perplexity, LLM API integration

## Work Experience

**VE3 Global** London, UK

*Senior Full Stack Engineer* *December 2023 – Present*

**Fuel Finder — UK Government Digital Service (DESNZ / GOV.UK)**

- Led end-to-end frontend development of Fuel Finder, a GOV.UK fuel-price transparency service serving millions of UK users, using Next.js (App Router), TypeScript, and GOV.UK Frontend v5 across 50+ routes and 40+ integrated API endpoints.
- Designed and implemented a complete RBAC system from scratch — 6 user roles, a granular permission matrix, and Next.js middleware enforcing route-level access control on every request.
- Integrated GOV.UK One Login (OAuth 2.0) authentication with cookie-based session management, cross-tab session synchronisation, and automatic session-expiry handling.
- Built a centralised Axios API layer with AES payload encryption/decryption interceptors, retry logic with exponential backoff, and a uniform typed response contract.
- Delivered a 13-step public motorist complaint journey and an 8+ step forecourt registration flow using Jotai atomic state, postcode lookup, and file upload.
- Implemented full bilingual (English/Welsh) internationalisation with i18next across 10+ translation namespaces, meeting WCAG 2.1 AA and GDS accessibility standards.
- Owned DevOps configuration: multi-stage Docker builds, AWS CodeBuild pipelines, and Kubernetes manifests for staging and production environments.

**FF-Support — Fuel Finder Admin & Support Portal**

- Built the internal admin portal (Next.js 16, React 19, TypeScript, TanStack Query v5) used by operations teams to administer thousands of registered fuel stations; authored 173+ commits across features, reporting, and platform hardening.
- Developed a suite of 15+ regulatory compliance and operational reports (non-compliance, discrepancy, closure compliance, API performance) with filtering, pagination, timezone-aware timestamps, and CSV export.
- Implemented PII protection across the platform: data masking at render, role-gated unmask actions, and a secure payload decryption tool for privileged users.
- Delivered operational admin tools end-to-end — location-notice dispatch with preview, SMS initiation, KPI publishing — plus a background-jobs UI with execution safeguards (confirmation dialogs, role checks).
- Led security audits, dependency upgrades, and a full design-system rebrand (GOV.UK GDS → VE3) while maintaining accessibility compliance.

**Workforce Management SaaS — Multi-Tenant Platform (Sole Engineer)**

- Architected and built a multi-tenant workforce-management SaaS end-to-end (Next.js 16, TypeScript, Supabase/PostgreSQL) covering employee management, project staffing, resource allocation, bench tracking, and capacity analytics dashboards (Recharts).

- Migrated a live single-tenant application to multi-tenant architecture with zero data loss using 30+ versioned SQL migrations and Postgres Row-Level Security for database-enforced tenant isolation.
- Implemented enterprise auth (per-organisation SSO, OTP password reset, approval-gated onboarding), granular RBAC, plan-based feature flags with seat limits, audit logging, and rate limiting.
- Built Node.js/Python ETL pipelines to import and reconcile HR data from CSV exports into PostgreSQL.

**VE3 Platform Frontend — Enterprise Monorepo & Design System**

- Architected an Nx Integrated Monorepo (Next.js 16, React 19, TypeScript) and built a shared UI library of 9 accessible, fully-tested components on Radix UI primitives, consumed across multiple micro-frontend apps.
- Established a multi-layer testing strategy — Vitest + React Testing Library (unit), Storybook 10 play functions (interaction), and Cypress 15 (E2E) — with full coverage across the design system.
- Set up developer tooling standards: ESLint flat config with accessibility plugins, Prettier, Husky pre-commit hooks, and Nx distributed caching for sub-second CI task replay.

**AI Products — MatchX & PromptX**

- Led React/Node/Python development of MatchX, a data-matching and cleansing product integrating multiple LLM and data-analytics tools.
- Led the frontend team for PromptX, an AI-powered enterprise knowledge and workflow-automation SaaS, including architecture for multi-factor subscription models and onboarding.
- Trained and mentored interns on production projects and streamlined Agile processes across teams, keeping delivery synchronised with client repositories.

**Shipthis** Bengaluru, India
*Software Engineer* *October 2023 – November 2023*

- Developed client-driven ERP features with Angular and TypeScript, delivering pixel-perfect UIs from Figma designs with Tailwind CSS, and optimised existing API operations.
- Supported global client onboarding calls and streamlined team Git workflows and repository management.

**OpenSense Labs** New Delhi, India
*Associate Software Developer (Intern: Jul 2021 – Jul 2022)* *July 2022 – September 2023*

- Designed and developed dynamic, responsive web applications using React, JavaScript, HTML, and CSS/SCSS, integrating RESTful APIs for real-time data.
- Owned frontend and backend development and maintenance of multiple Drupal (7/8/9) websites — custom modules and Twig theming — delivering on deadline with seamless UX.
- Collaborated with cross-functional teams to gather requirements and ship client projects; promoted from intern to associate within the first year.

## Projects

**TrackerX — AI-Assisted Spend Tracker** *In Development*

- Building an AI-assisted expense-tracking web app with automatic transaction categorisation, budget creation, and monthly/yearly visual dashboards; defined product scope, data flows, and non-functional requirements (performance, security, data integrity) for handling sensitive financial data at scale.

**KiranaOP — E-Commerce Startup**

- Launched a responsive online grocery platform during the pandemic (PHP, JavaScript, Bootstrap, SQL) with contactless delivery and secure payments.

## Open Source & Publications

- **NPM packages:** Advance-Dynamic-Table, TypeWriter Effect
- Published a research paper at the 4th National Conference RTCSIT-2022, in association with the Computer Society of India
- 1st place — Website Development Competition, Srishti Technical Fest 2022; Samsung Innovation Coding Programme

## Education

**Sri Krishna Institute of Technology** Bangalore, India
*B.E. in Computer Science & Engineering* *2018 – 2022*
